

## Seeing Green Around the Golden Horseshoe

---

**Customers like Duivenvoorden Haulage, based in Innisfil, Ontario, understand the power and the practicality of filling quarries with McCloskey.**

They have a fleet of McCloskey equipment at work in three quarries, and have expanded their business by providing custom crushing for customers.

When asked why he chooses to work with McCloskey, John Duivenvoorden replies “The relationship is what keeps me coming back to McCloskey. They play a role more like a partner than a supplier, continually contributing to my operations with easy- to-use and reliable equipment. At the end of the day it all comes down to how productive you are, and McCloskey crushers and screeners are a big part of our success – in good markets, and bad.”

Growing from the first 621 Trommel he purchased 10 years ago, Duivenvoorden has added a duo of crushers– the J50 and C44 – that are in the field providing product for Duivenvoorden, as well as an S190 Triple Deck and S130 Screeners, which now service three quarries in the Golden Horseshoe region in Ontario.

McCloskey International leads the screening and crushing industry with a complete line of equipment including crushers, vibrating screeners, trommels and stacking conveyors. McCloskey has established an international reputation for high performing products that have introduced many of today’s key screening and crushing innovations.

Built with power and durability as standards, every product is field-tested before being deployed in a wide range of industries which include compost screening, aggregates processing, waste recycling, construction & demolition, landscaping and wood recycling.
